(54) Thermosetting polysiloxanic composition for protective coatings and process for coating polycarbonate sheets.

(57) A thermosetting organosiloxanic composition for protective coatings consists of a solvent and of the reaction product of four components, each one selected from one of following classes:

- (a) aminoalkoxysilanes;
- (b) formaldehyde or substances able to release formaldehyde;
- (c) alkyl- or alkenyl-acyloxy-silanes;
- (d) water; and is obtained by interreacting metered amounts of (a) and (b) components, by operating in the absence of solvents or diluents, and, separately, metered amounts of (c) and (d) components, by operating in an alcoholic solvent, and then mixing together the two reaction products obtained.

Also a process is disclosed for polycarbonate sheets coating, by means of the above compositions.
